DAS Semantics

Theories of meaning and the meaning of words

Francis Bond

Department of Asian Studies Palacký University

https://fcbond.github.io/ bond@ieee.org

Lecture 2

The meanings of words

Words carry different meanings: *leave*

- 10070 Nothing was <u>left</u> save a few acres of ground, and the two-hundred-year-old house, which is itself crushed under a heavy mortgage.
- 10079 The money which my mother had <u>left</u> was enough for all our wants, and there seemed to be no obstacle to our happiness."
- 10085 He had no friends at all save the wandering gipsies, and he would give these vagabonds <u>leave</u> to encamp upon the few acres of bramble- covered land which represent the family estate, and would accept in return the hospitality of their tents, wandering away with them sometimes for weeks on end.
- 10107 She <u>left</u> her room, therefore, and came into mine, where she sat for some time, chatting about her approaching wedding.
- 10108 At eleven o'clock she rose to <u>leave</u> me, but she paused at the door and looked back.

10439 "The rest you will leave in our hands . "

10449 And now, Miss Stoner, we must <u>leave</u> you for if Dr. Roylott returned and saw us our journey would be in vain.

10526 Then he turned down the lamp , and we were left in darkness .

How many different meanings?

How can we represent the differences?

- > Definitions
- > Translations/paraphrases
- > Semantic Relations
- > Components
- Vector Spaces

Semantic Representations of Words

- Divide meaning into
 - reference: the relation to the world/mental space
 - sense: the rest of the meaning
 - denotation the part that distinguishes the meaning from other meanings
 - * connotation cultural or emotional associations
- > Introduce concepts

(meaning as font-change)

- How can we represent concepts?
- > How do we learn them?
 - Typically children start off by underextending or overextending concepts
- > Example: That dog
 - > reference the animal over there
 - sense canine quadruped domesticated by man
 - connotation faithful, friendly (or dirty)

Definitional Semantics

Standard lexicographic approach to lexical semantics:

```
semantics = the study of language meaning
tailor = a person whose occupation is making and altering garments
```

- Definitions are conventionally made up of;
 - > genus: what class the lexical item belongs to
 - differentiae: what attributes distinguish it from other members of that class
- Often hard to understand if you don't already know the meaning!

Definitional Semantics: pros and cons

> Pros:

familiarity (we are taught to use dictionaries)

> Cons:

- subjectivity in sense granularity (splitters vs. lumpers) and definition specificity
- circularity in definitions
- > consistency, reproducibility, ...
- often focus on diachronic (historical) rather than synchronic (current) semantics

Entries for *leave*

- **02015598-v** (72) V1, V2 *get out, go out, leave, exit* "move out of or depart from"
- **02356230-v** (8) V3 *leave, entrust* "put into the care or protection of someone"
- **02009433-v** (149) V1 *leave, go away, go forth* "go away from a place"
- 02229055-v (7) V3 *leave, will, bequeath* "leave or give by will after one's death"
- 02729414-v (56) V2 *leave* "act or be so as to become in a specified state"
- **02730135-v** (5) V2 *leave* "have left or have as a remainder"
- **06690114-n** (1) *leave* "permission to do something"

Not to be confused with *left hand* and *the leaves fell*,

Paraphrases and translation

- Saying the same thing in different words
 - Same language = paraphrase
 - Different language = translation
- > We showed some paraphrases in the entries given above
- If you speak another language, then you can use that to disambiguate may things.
 - ➤ **leave**, **entrust** = 預ける azukeru
 - ➤ get out, go out, leave, exit = 去る saru
 - > leave, will, bequeath = 遺す nokosu
- Can you explain the ambiguity in The money which my mother had <u>left</u> was enough for all our wants?

Paraphrase cues

> that is to say

- ➤ I met him that night, and he called next day to ask if we had got home all safe, and after that we met him that is to say, Mr Holmes, I met him twice for walks, ... IDEN
- ➤ In three days, that is to say on Monday next ... FINA

> in other words

- > ...there is a possibility that these initials are those of the second person who was present in other words, of the murderer. ... BLAC
- > ...when they closed their League offices that was a sign that they cared no longer about Mr. Jabez Wilson's presence; in other words, that they had completed their tunnel. REDH

Lexical Semantics

- Lexical semantics is concerned with the identification and representation of the semantics of lexical items
- If we are to identify the semantics of lexical items, we have to be prepared for the eventuality of a given word having multiple interpretations
 - Polysemy: having multiple meanings
 - Monosemy: having only one meaning
- > Homonyms are words with two unrelated meanings:
 - homographs: same spelling bow vs bow; keep vs keep
 - homophones: same pronunciation right vs write; keep vs keep

Distinguishing Polysemes

Antagonism: can the word be used in a sentence with multiple competing interpretations that are incompatible?

Kim can't bear children

- Cannot have children
- Doesn't like children
- Zeugma: can the word be used in a context where multiple competing interpretations are simultaneously evoked?

Kim and her visa expired

- > died
- > ran out

Hitmen were quite expensive, so she decided to take out a loan and her husband.

Paraphrase/Translation: Is there more than one (clearly different) way to paraphrase/translate the word.

Necessary and Sufficient Conditions

- Can we define words in terms of conditions?
 - > zebra
 - * quadruped
 - * animal
 - * black and white striped
 - * herbivore
- > These are intrinsic, generic properties
- Can we use words even if we don't know their properties?
 - Kway Teow
- > We seem to be ok with fairly vague definitions
 - What is a dog-cart?
 - What is a swamp adder?

(redundant)

Words/Concepts are related in many ways

We can also look at words (or more properly senses) in terms of their relations to other words.

- Hyponymy/Hypernymy
- > Synonymy
- Antonymy (Opposites)
- > Meronymy
 - > Member-Collection
 - > Portion-Mass
 - > Element-Substance
- Domain (lexical field)

Hypernymy and Hyponymy

Hyponymy: X is a hyponym of Y iff f(X) entails f(Y) but f(Y) does not entail f(X) (for all or most f):

```
Kim has a pet \underline{dog} \models Kim has a pet \underline{animal}
Kim has a pet \underline{animal} \not\models Kim has a pet dog
```

N.B. complications with universal quantifiers and negation:

```
Kim likes all \underline{animals} \models Kim likes all \underline{dogs}
Kim likes all \underline{dogs} \not\models Kim likes all \underline{animals}
```

- > Hypernymy: Y is a hypernym of X iff X is a hyponym of Y
- > Can a word have multiple hypernyms?
 - (1) tank₁ ⊂ military_vehicle₁; ⊂ tracked_vehicle₁; ⊂ armored_vehicle₁;
 ? ⊂ weapon₁

What is entailment

Entailment (\vDash): A sentence p entails a sentence q when the truth of the first (p) guarantees the truth of the second (q), and the falsity of the second (q) guarantees the falsity of the first (p).

Properties of hypernymy/hyponymy

- Asymmetric; applies at the sense level
- applies only to lexical items of the same word class
- ightharpoonup Transitive: $dog_1 \subset mammal_1 \subset animal_1$
- > Not all nodes are lexicalized; can be multiple

neutral (Hyper)	male	female	child
sheep	ram	ewe	lamb
COW	bull	cow	calf
goose	gander	goose	gosling
horse	stallion	mare	foal:colt/filly
dog	dog	bitch	puppy
snake	snake	snake	snake

- > Can you do this for *pig*, *cat* or *chicken*?
- > Can you give an example of this in another language?

Language Change

- > The meanings of words change over time
- guitar "a stringed instrument usually having six strings": originally these were all made of wood
- > We then get *electric guitar* "a guitar with a built-in pickup or pickups which convert string vibrations into electrical signals for amplification"
- ➤ To refer to non-electric guitars we get a new coining *acoustic guitar* "a guitar that does not require electrical amplification": which used to just be guitar
 - > guitar is now a hypernym of them both and can refer to either

- Sometimes this practice becomes politically charged, although linguistically it is unremarkable
 - woman "an adult female person"
 - trans woman "a person who identifies as a woman but was assigned male at birth"
 - cis woman "a person who identifies as a woman and was assigned female at birth"
- > Can you give other examples of this in English or other languages?

Synonymy

- > Propositional synonymy: X is a propositional synonym of Y if
 - ➤ (i) X and Y are syntactically identical,
 - (ii) substitution of Y for X in a declarative sentence doesn't change its truth conditions

e.g., *violin* and *fiddle*

- > Why propositional synonymy is over-restrictive:
 - syntactic identity (cf. eat and devour)
 - collocations (cf. cemetery and graveyard)
 - gradability (cf. sofa/settee vs. boundary/frontier)

Near Synonymy

- Synonyms are substitutable in some/most rather than all contexts
- Synonymy via semantics: synonyms share "common traits" or attributional overlap, walking the fine line between "necessary resemblances" and "permissible differences":

grain vs. granule; green vs. purple; alsation vs. spaniel

> Permissible differentiation via clarification:

Here is a grain, or granule, of the substance.

* The cover is green, {or, that is to say} purple.

and **contrast**:

Here is a <u>grain</u> or, more exactly, <u>granule</u>
* He likes <u>alsations</u>, or more exactly, <u>spaniels</u>

Properties of synonymy

- > Symmetric
- traditionally applies only to lexical items of the same word class but pairs like can vs be able to suggest otherwise
- applied at the sense level?
- ➤ ≈ converse of polysemy

Antonymy (opposites)

- Simple antonyms: the negative of one implies the positive of the other.
 - (2) dead/alive
 - (3) pass/fail
- Gradable Antonyms: points along a scale
 - (4) boiling/hot/warm/tepid/cool/cold/freezing
 - (5) like this class/fascinating/interesting/dull/boring
- > Reverses: reverse the direction of a motion
 - (6) ascend/descend
 - (7) up/down; right/left

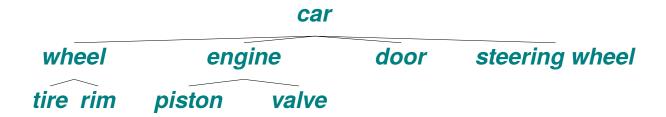

- Converses: the same act from different points of view
 - (8) above/below; right/left
 - (9) employer/employee

(Slightly non-standard usage)

- > Taxonomic Sisters: children of the same (grand)parent
 - (10) Monday/Tuesday/.../Sunday in WordNet: day of the week ⊃ weekday, weekend
 - (11) LMS/English/Chinese/...
 Context dependent

Meronymy

- Meronomy refers to the part-whole relation
 - > meronym is the part
 - > holonym is the whole

It is not always transitive shirt
button
button hole

But we don't normally say that a **button hole** is part of a **shirt**.

Member-Collection

- > The relation between a collection and one of the units that makes it up
 - (12) *tree–forest*
 - (13) sheep-flock
 - (14) fish-school
 - (15) book–library
 - (16) *member–band*
 - (17) musician-orchestra
 - (18) student-class

Portion-Mass

- > The relation between a mass noun and a typical unit of measurement
 - (19) drop-liquid
 - (20) grain-sand/salt/truth
 - (21) sheet/ream-paper
 - (22) *lump–coal (or just about anything)*
 - (23) strand-hair
 - (24) rasher-bacon
- > Similar to classifiers in many ways, e.g. in Malay
 - (25) ekor "tail"—animal
 - (26) *orang* "human"-person

Domain (lexical field)

The domain in which a word is typically used with this meaning.

- (27) *driver*₁ the operator of a motor vehicle
- (28) *driver*₂ someone who drives animals that pull a vehicle
- (29) driver₃ a golfer who hits the golf ball with a driver [GOLF]
- (30) $driver_4$ (\simeq device driver) a program that determines how a computer will communicate with a peripheral device [COMPUTER SCIENCE]
- (31) $driver_5$ (\simeq number one wood) a golf club (a wood) with a near vertical face that is used for hitting long shots from the tee [GOLF]

Some GOLF terms: $approach_9$, $approach shot_1$, $golf course_1$, $links course_1$, $wedge_5$, tee_1 , $scratch_9$, $putt_1$, $slice_1$, $hook_1$

And More

- There are many, many more lexical relations advocated by various theories including:
 - Troponymy/hypernymy (cf. walk vs. lollop) "way of doing something"
 - Entailment (cf. snore vs. sleep) "if you do one thing, you must be doing the other"
 - Operator (cf. question vs. ask) "the thing you do by doing something"
 - Magnifier (cf. wound vs. badly) "intensifier, diminisher"
 - Usage (cf. strong-willed vs. pig-headed "stubborn") pig-headed is pejorative

Wordnet

WordNet

WordNet is an open-source electronic lexical database of English, developed at Princeton University

```
http://wordnet.princeton.edu/
```

- Made up of four separate semantic nets, for each of nouns, verbs, adjectives and adverbs
- > WordNets exist for many languages, my group has worked on:
 - Japanese
 - Bahasa Malay/Indonesian
 - Chinese (Mandarin and Cantonese)
 - The shared open multi-lingual wordnet (150+ languages)

```
https://omwn.org/
```

- Kristang
- Myanmar
- > Czech

Wordnet Structure

ightharpoonup Lexical items are categorised into \sim 115K (and counting) glossed **synsets** (= synonym sets)

```
    enrichment -- (act of making fuller or more meaningful or rewarding)
    enrichment -- (a gift that significantly increases the recipient's wealth)
```

- Lexical relations at either the synset level or sense (= combination of lexical item and synset) level
- Strongly lexicalist (orginally):
 - synsets only where words exist
 - ightharpoonup but many multiword expressions ($\approx 50\%$)

Psycholinguistic Foundations of WordNet

- Strong foundation on hypo/hypernymy (lexical inheritance) based on
 - response times to sentences such as:

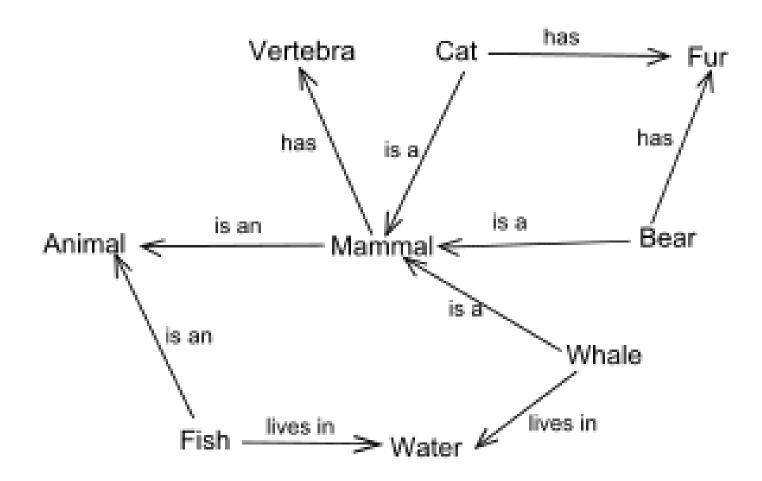

```
a canary {can sing/fly,has skin}
a bird {can sing/fly,has skin}
an animal {can sing/fly,has skin}
```

> analysis of anaphora:

```
I gave Kim a novel but the {book,?product,...} bored her Kim got a new car. It has shiny {wheels,?wheel nuts,...}
```

- selectional restrictions
- Is now often used to calculate semantic similarity
 - The shorter the path between two synsets the more similar they are
 - > Or the shorter the path to the nearest shared hypernym, ...

Word Meaning as a Graph

> You need a very big graph to capture all meanings

Wordnet in this course

- We will use wordnet to test our skills in determining word meaning
 - > tag a short text from this year's story or stories
 - discuss differences with other annotators
- > As well as a source of examples and inspiration

Word Sense Disambiguation for Close Reading

Close Reading

- Reading (and often re-reading) a text to uncover multiple aspects of meaning that lead you to understand a text better
- Looking at what the text actually says, as well as the inferences you make from reading it
- After a close reading you should be able to support your conclusions with specific examples from the text
- You can consider many aspects of the text, such as
 - > The Title
 - Word Choice
 - The Tone and Style
 - Discerning Patterns
 - > Point of View and Characterization
 - > Symbolism

Word Choice and Diction

- What word(s) stand out? Why? (typically vivid words, unusual choices, or a contrast to what a reader expects)
- How do particular words get us to look at characters or events in a particular way? Do they evoke an emotion?
- Did the author use nonstandard language or words in another language? Why? What is the effect?
- Are there any words that could have more than one meaning? Why might the author have played with language in this way?
- Do some words have extra connotations?

We will focus on this

Word Sense Disambiguation

- > Knowing what individual words mean is the first step towards understanding
- We will try to identify the sense of words
 - ➤ We use Wordnet (Fellbaum, 1998) as the sense inventory because it contains semantic relations as well as definitions and it is accessible: there are good interfaces to it
 - For every word we chose the most appropriate sense in wordnet or write a comment if we think there isn't one
 - Once we have identified a sense, it is then easy to look at synonyms and other closely related words

- > Sherlock Holmes had been leaning back in his chair with his eyes closed and his head sunk in a cushion, but he half opened his <u>lids</u> now and glanced across at his visitor.
 - 1. *hat, chapeau, lid* "headdress that protects the head from bad weather; has shaped crown and usually a brim"
 - 2. *lid, eyelid, palpebra* "either of two folds of skin that can be moved to cover or open the eye"
 - 3. *lid* "a movable top or cover (hinged or separate) for closing the opening at the top of a box, chest, jar, pan, etc."

- > This is difficult for many reasons
 - Meaning boundaries are not clear: the sense distinctions impose a structure on something that is actually fuzzy
 - Dictionaries are imperfect
 - * senses may be missing
 - * senses may be too fine-grained
 - Processing a text by computer is difficult
 - * The computer may have misinterpreted
 - the part-of-speech
 Does that go "Female deer which go" "Is it the case that is goes?"
 The speckled band "the band that is speckled" "the band that someone speckled"
 - Or the sentence boundaries
 - Or the words boundaries
 - > People use language idiosyncratically
 - * extending meanings metaphorically
 - * sometimes so strangely that we might even say wrongly

- > Typically people agree around 72.5% of the time (Snyder and Palmer, 2004).
 - * Verbs are hardest (67.8%), then nouns (74.9%) and adjectives (78.5%)
 - * Disagreements tend to cluster around a relatively small group of difficult words.
 - * For example *national*
 - In six out of seven instances one annotator chose "limited to or in the interests of a particular nation" and the other annotator chose "concerned with or applicable to or belonging to an entire nation or country"
 - They are hard to distinguish!

Projects 1 and 2

- 1 Identify and annotate word meaning for your own passage of one of the stories using wordnet as the sense inventory: 3 or 4 people do the same set of sentences.
 - For every word that needs to be tagged, either
 - * Chose a sense in wordnet
 - * Identify it as a named entity
 - Identify a problem in the corpus or wordnet and leave a comment saying what the it should be
 - ➤ Do this on your own the goal is to think about the words' meanings
- 2 Compare and contrast your annotations with other annotators; re-annotate based on your discussion and leave comments for at least five words.
 - > We expect you to disagree 30-40% of the time (more often than experts)
 - Sometimes you will have made a careless mistake
 - Sometimes you will have interpreted wordnet differently
 - Sometimes you will have interpreted the passage differently
 - Discussing meaning deepens your understanding of it

Conclusions

> We learned a little about word meaning, wordnet, close reading and your assignment
