Semantics: Tutorial One

Francis Bond

- 1. Try and define the following words without a dictionary:
 - $(1) \quad \textbf{high school}$
 - (2) rat
 - (3) mouse
 - (4) copper
 - (5) dumpling
- 2. Try and define the translation equivalents of the above words in a language of your choice.

Have you encountered any difficulties? If so what?

- 3. Try to give some examples of demonstratives (like *this* and *that*) in another language. Look at least at words used to refer to things, locations and time
 - Do you get similar regularities?
